PREFACE

Each year, the Puerto Rico Planning Board publishes the **Statistical Appendix of the Economic Report to the Governor** as an advance of the statistical information later available at the **Economic Report to the Governor**. This **Statistical Appendix of the Economic Report to the Governor 2005** contains Puerto Rico's most important socioeconomic figures for fiscal year 2005 as well as previous years.

This publication is divided into three sections. The first one includes 34 tables with information from fiscal years 1996 through 2005. For a better understanding of the main variables' historical trend, we also include a second section with 32 graphs, plus a third one with 26 growth rates.

We acknowledge the public agencies and private organizations, which provided the information, used in the preparation of this report, and we urge users to broaden their respective economic and social analysis of Puerto Rico with the **Economic Report to the Governor 2005**.

TASAS DE CRECIMIENTO

GROWTH RATES

INTERPRETACION DE LOS CUADROS DE TASAS DE CRECIMIENTO ANUAL

Esta sección del **Apéndice Estadístico del Informe Económico al Gobernador de 2005** incluye cuadros con las tasas de crecimiento para los años fiscales 1982 al 2005 correspondientes a las siguientes variables económicas:

1. producto bruto
2. producto bruto per cápita
3. gastos de consumo personal
4. gastos de consumo personal per cápita
5. gastos de consumo personal de bienes duraderos
6. gastos de consumo personal de bienes no duraderos
7. gastos de consumo personal de servicios
8. gastos de consumo del gobierno
9. inversión interna bruta de capital fijo
10. inversión en construcción
11. inversión en construcción de vivienda privada
12. inversión en maquinaria y equipo
13. producto bruto interno
14. producto bruto interno per cápita
15. ingreso personal
16. ingreso personal per cápita
17. ingreso personal disponible
18. ingreso personal disponible per cápita
19. ingreso neto
20. ingreso neto per cápita
21. índice implícito de precios para deflacionar el producto bruto
22. índice implícito de precios para deflacionar los gastos de consumo personal
23. empleo
24. desempleo
25. población
26. deuda pública bruta

Los cuadros para estas variables se presentan a precios corrientes y constantes en los casos donde corresponda. Cada uno de éstos contiene las tasas de crecimiento anual para dos años en específico, cualesquiera que éstos sean para la serie presentada en esta publicación. Los cuadros están divididos por una línea diagonal formando dos triángulos. Las tasas de crecimiento a precios corrientes se presentan en el triángulo inferior y las tasas de crecimiento a precios constantes en el triángulo superior. La ventaja de este ordenamiento es que permite comparar directamente, entre dos años dados, la tasa de crecimiento monetario con la tasa de crecimiento real de una determinada variable macroeconómica.

El cuadro se lee igual que el sistema de coordenadas cartesianas. Tanto en el eje de las abscisas (eje horizontal) como en el de las ordenadas (eje vertical) aparecen los años. En el punto o celda de intersección de dos años dados aparece la tasa de crecimiento para el periodo.

Si se interesa obtener la tasa de crecimiento de una variable a precios corrientes entre dos años dados, se busca primeramente en el eje vertical el año más reciente y se mueve en dirección horizontal hacia la derecha, hasta encontrar la intersección con el otro año. El valor que aparece en la celda de intersección es la tasa de crecimiento monetario durante el periodo. En cambio, si lo que se interesa es obtener la tasa de crecimiento a precios constantes de la misma variable, se busca primeramente en el eje horizontal (en el tope del cuadro) el año mas reciente y se mueve en dirección vertical, hasta encontrar la intersección con el otro año. De este modo, se obtiene la tasa de crecimiento real durante el periodo. Por ejemplo, la tasa de crecimiento anual del producto bruto a precios corrientes en el periodo de 1987 al 1995 fue de 6.5 por ciento. En cambio, la tasa de crecimiento a precios constantes de esa variable en el mismo periodo fue de 2.7 por ciento. Al realizar el procedimiento conviene recordar que se debe partir del año más reciente.

INTERPRETATION OF THE ANNUAL GROWTH RATES TABLES

This section of the **Statistical Appendix of the Economic Report to the Governor 2005** includes growth rates tables for fiscal years 1982 through 2005, corresponding to the following economic variables:

1. gross product
2. per capita gross product
3. personal consumption expenditures
4. per capita personal consumption expenditures
5. personal consumption expenditures of durable goods
6. personal consumption expenditures of non durable goods
7. personal consumption expenditures of services
8. government consumption expenditures
9. gross fixed domestic investment
10. construction investment
11. private housing construction investment
12. machinery and equipment investment
13. gross domestic product
14. per capita gross domestic product
15. personal income
16. per capita personal income
17. disposable personal income
18. per capita disposable personal income
19. net income
20. per capita net income
21. implicit price deflators for gross product
22. implicit price deflators for personal consumption expenditures
23. employment
24. unemployment
25. population
26. gross public debt

The tables for these variables are presented at current and constant prices where applicable. Each one of these contains the annual growth rates for specifically two years, whichever they are for the series presented in this publication. The tables are divided by a diagonal line forming two triangles. The growth rates at current prices are at the lower triangle and the growth rates at constant prices are at the upper triangle. The advantage of this layout is that it permits a direct comparison, between two years, of the nominal growth rate with the real growth rate of a determined macroeconomic variable.

The table is read the same as in Cartesian coordinates. The years appear at both the abscissas axis (horizontal axis) as well as that of the ordinates (vertical axis). At the intersection point or cell for two given years, the growth rate for such period appears.

If it is interested in obtaining a variable's growth rate at current prices between two given years, first look at the vertical axis for the most recent year and move towards horizontally to the right, until the other year's intersection is found. The value appearing at the intersection cell is the nominal growth rate during such period. On the other hand, if it is interested in obtaining the constant growth rate for the same variable, look first the horizontal axis (at the top of the table) of the most recent year and move in a vertical direction, until the intersection with the other year is found. Hence, the real growth rate during such period is obtained. For example, the gross product's annual growth rate at current prices for the period of 1987 through 1995 was 6.5 percent. On the other hand, the growth rate at current prices for such variable during the same period was 2.7 percent. While doing the procedure it is convenient to remember that you must start from the most recent year.
