PREFACIO

El Subprograma de Análisis Económico realiza anualmente la Encuesta de la Construcción. Esta publicación presenta, basada en los resultados de la Encuesta, un compendio de estadísticas seleccionadas sobre la industria de la construcción para los años fiscales de 1991 al 2002, desglosadas en 18 tablas y 6 cuadros de tasas de crecimiento. Entre las estadísticas presentadas se encuentran: la inversión en construcción realizada por agencias, corporaciones públicas y municipios; los permisos de construcción expedidos; la producción y venta de cemento; el empleo en construcción; y las tasas de interés primario e hipotecario en Puerto Rico. Se incluyen además, tablas relacionadas con: número y valor de las nuevas unidades de vivienda para proyectos unifamiliares, multifamiliares y residencial-comercial; y las importaciones de cemento a Puerto Rico, entre otras.

Agradecemos la valiosa cooperación brindada al Subprograma de Análisis Económico por las diferentes empresas constructoras y desarrolladoras del sector privado y las agencias del gobierno, en la fase de recopilación de información para esta publicación.

- **inversión en construcción de vivienda privada;**
- **inversión en construcción de vivienda pública; y**
- **empleo total en la construcción.**

Los cuadros para estos componentes aparecen a precios corrientes y constantes en los casos donde corresponda. Cada uno contiene las tasas de crecimiento anual para dos años en específico. Los cuadros están divididos por una línea diagonal formando dos triángulos. Las tasas de crecimiento a precios corrientes aparecen en el triángulo inferior y las tasas de crecimiento a precios constantes, en el triángulo superior. La ventaja de este ordenamiento es que permite comparar directamente la tasa de crecimiento monetario con la tasa de crecimiento real de una determinada variable macroeconómica entre dos años dados.

El cuadro se lee igual que el sistema de coordenadas cartesianas. Tanto en el eje de las abscisas (eje horizontal) como en el de las ordenadas (eje vertical) aparecen los años. En el punto o celda de intersección de dos años dados aparece la tasa de crecimiento para el periodo.

Si se interesa obtener la tasa de crecimiento de una variable a precios corrientes entre dos años dados, se busca primeramente en el eje vertical el año más reciente y se mueve hacia la derecha en dirección horizontal hasta encontrar la intersección con el otro año. El valor que aparece en la celda de intersección es la tasa de crecimiento monetario durante el periodo. En cambio, si lo que se interesa obtener es la tasa de crecimiento a precios constantes de la misma variable, se busca primeramente en el eje horizontal (en el tope del cuadro) el año más reciente y se mueve en dirección vertical, hasta encontrar la intersección con el otro año. De este modo, se encuentra la tasa de crecimiento real durante el periodo. En todos los años, conviene recordar que se debe partir del año más reciente cuando se vaya a realizar el procedimiento. Por ejemplo, la tasa de crecimiento anual de la inversión total en construcción a precios corrientes en el periodo de 1992 al 1995 fue de **7.2** por ciento. En cambio, la tasa de crecimiento a precios constantes de esa variable en el mismo periodo fue de **3.4** por ciento.
