## INTRODUCCION

El insumo producto es un estudio empírico de las relaciones que se dan entre los distintos sectores de una economía. Podría afirmarse que es el estudio macroeconómico más abarcador que realiza el gobierno, ya que envuelve todos los sectores de la economía del país, en términos de producción y consumo. Las industrias son productoras y consumidoras al mismo tiempo (DI), y además abastecen la demanda que es para consumo final (DF).

Se dice, y es cierto, que el insumo producto es un sistema de contabilidad. Pero no es un sistema de contabilidad convencional donde se registran a un lado y al otro los débitos y los créditos. Es un sistema de contabilidad en forma de matriz, donde se balancea el abastecimiento y el uso de la producción económica, conformando así un modelo que define la estructura y dinámica de esa economía durante un determinado periodo.

Componentes principales dentro de este modelo lo son la producción local, las importaciones, el valor añadido, la demanda intermedia y la demanda final. Estas dos últimas equivalen al uso que le dan los diferentes sectores a la oferta de bienes y servicios que hay en el mercado.

La demanda intermedia representa las transacciones de compra-venta que hacen las industrias durante sus respectivos procesos de producción. Estas transacciones reflejan en el cuadro de insumo producto la procedencia de los bienes y servicios consumidos, en términos del sector que lo produjo y de si fue adquirido localmente o fue importado.

La demanda final es el valor que representa la parte que fue adquirida por los cuatro grupos de consumidores finales, que son: las personas, las empresas, el gobierno y el resto del mundo.

El valor añadido representa los pagos a los factores de producción y por eso aparece en la tabla de transacciones interindustriales. Sumado al consumo intermedio de las industrias es igual a la producción local.

La diferencia principal entre el sistema de insumo producto y el de las cuentas sociales de ingreso y producto es que éstas miden la economía desde el punto de vista de las compras y de los ingresos, mediante el producto bruto y el valor añadido, respectivamente. Ninguno de estos métodos contabiliza las compras

intermedias, por lo que la producción se mide a precios de comprador. De aquí, que el insumo producto complementa y equilibra el sistema de las cuentas sociales y sirve de cotejo para verificar el estimado de muchas de sus partidas, lo cual es una de sus mayores contribuciones al análisis económico.

Además, es el estudio que permite medir los impactos directos e indirectos de ciertas variables macroeconómicas sobre otras, analizar los eslabonamientos entre industrias, los cambios estructurales en la economía, el grado de integración de esa economía a nivel local o externo y, sobre todo, es la base del Modelo Econométrico de la Junta de Planificación, utilizado para hacer las proyecciones económicas.

En la página siguiente se encuentra la matriz agregada. Esta recoge las transacciones de todas las industrias, agrupándolas en cinco sectores principales, a la vez que aparecen resumidas en una sola tabla la demanda intermedia y la demanda final.

*Nota:* Cualquier discrepancia en la suma de los totales, se debe a la acumulación de puntos decimales.

## LECTURA DE LAS MATRICES

### MATRIZ TOTAL DE TRANSACCIONES INTERINDUSTRIALES

La matriz de transacciones interindustriales se presenta a 94 industrias y también, agregada a cinco sectores para facilitar su comprensión. Lo que consume cada industria de las demás o sea, las compras, se lee por columna. Por fila, se leen las ventas, es decir la distribución de la producción.

Cada coordenada representa una transacción. Las transacciones están valoradas a precios del productor y se desglosan entre producción local e importaciones, lo que demuestra si la compra-venta proviene de la producción local o si por el contrario es una importación. Vale recalcar que el consumo intermedio o compra se determina por columna y la demanda intermedia o venta se determina por fila. Si se desea conocer la demanda intermedia hay que ubicarse en la fila de la industria correspondiente y buscar la cantidad con respecto a la columna de la industria que consume.

El valor añadido aparece y se suma al final de cada columna, ya que es parte de los gastos de las industrias en la elaboración de sus productos.

### TABLA DE DEMANDA FINAL Y RESUMEN

La tabla de demanda final muestra el consumo personal, la inversión, las exportaciones y el consumo de gobierno, por industria. Estos son los componentes del producto bruto y junto a la demanda intermedia, constituyen el total de usos de la producción de un país. Incluye los siguientes sectores económicos: las personas, el gobierno, las empresas del sector privado y el resto del mundo.

El consumo personal se divide entre bienes duraderos, no duraderos y servicios. La inversión total se desglosa entre inversión en maquinaria y equipo, construcción, otras inversiones y cambio en inventario. Las exportaciones se dividen entre mercancía y servicios y gastos de visitantes. Finalmente, el consumo de gobierno incluye gobierno estatal, municipal y federal.

La tabla de demanda final, al igual que la matriz de transacciones interindustriales, muestra si lo que fue consumido, invertido o exportado provino de la producción local o de las importaciones.

El resumen que aparece integrado a la derecha de la tabla de demanda final presenta los componentes del estudio de insumo producto, ya totalizados por industria. De aquí surge la ecuación del modelo de insumo producto.

$$DI + DF = TU - I = PL$$

donde, DI = demanda intermedia  
DF = demanda final  
TU = total de usos  
I = importaciones  
PL = producción local

#### MATRIZ DE REQUISITOS DIRECTOS

Se deriva de la matriz de transacciones interindustriales al dividir las compras que realiza cada industria por su producción correspondiente. El coeficiente obtenido expresa la proporción de insumos que la industria necesita de las demás para elaborar una unidad de producción bruta.

#### MATRIZ TOTAL DE REQUISITOS DIRECTOS E INDIRECTOS (INVERSA TOTAL)

Esta matriz presenta los efectos directos e indirectos que tiene la demanda final sobre la producción de cada industria. Esto significa, qué cantidad de insumos de cada unidad de producción está destinada a la demanda final. Por tanto, aquí aparece la producción requerida directa e indirectamente por cada industria, para satisfacer un dólar de la demanda final de la misma.

#### MATRIZ LOCAL DE REQUISITOS DIRECTOS E INDIRECTOS (INVERSA LOCAL)

Esta matriz expresa, al igual que la de requisitos totales, los efectos de la demanda final en la producción de cada industria, excluyendo las importaciones.

1. The first part of the document is a letter from the author to the editor, dated 10/10/1954. The letter discusses the author's interest in the subject of the journal and the possibility of publishing a paper on the topic.

### 2. The second part of the document is a letter from the editor to the author, dated 10/15/1954. The editor expresses interest in the author's work and suggests that the author submit a paper for consideration.

3. The third part of the document is a letter from the author to the editor, dated 10/20/1954. The author responds to the editor's letter and expresses interest in the editor's suggestions. The author also discusses the author's current work and the possibility of publishing a paper on the topic.

### 4. The fourth part of the document is a letter from the editor to the author, dated 10/25/1954. The editor expresses interest in the author's work and suggests that the author submit a paper for consideration.

5. The fifth part of the document is a letter from the author to the editor, dated 10/30/1954. The author responds to the editor's letter and expresses interest in the editor's suggestions. The author also discusses the author's current work and the possibility of publishing a paper on the topic.

### 6. The sixth part of the document is a letter from the editor to the author, dated 11/5/1954. The editor expresses interest in the author's work and suggests that the author submit a paper for consideration.

7. The seventh part of the document is a letter from the author to the editor, dated 11/10/1954. The author responds to the editor's letter and expresses interest in the editor's suggestions. The author also discusses the author's current work and the possibility of publishing a paper on the topic.

### 8. The eighth part of the document is a letter from the editor to the author, dated 11/15/1954. The editor expresses interest in the author's work and suggests that the author submit a paper for consideration.

9. The ninth part of the document is a letter from the author to the editor, dated 11/20/1954. The author responds to the editor's letter and expresses interest in the editor's suggestions. The author also discusses the author's current work and the possibility of publishing a paper on the topic.

*Nota:* Cualquier discrepancia en la suma de los totales, se debe a la acumulación de puntos decimales.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. This is essential for ensuring the integrity of the financial statements and for providing a clear audit trail. The records should be kept up-to-date and should be accessible to all relevant parties.

2. The second part of the document outlines the procedures for handling cash receipts and payments. It is important to ensure that all receipts are properly issued and that payments are made in a timely and accurate manner. This helps to prevent errors and ensures that the company's cash flow is managed effectively.

3. The third part of the document describes the process of reconciling bank statements with the company's records. This is a critical step in the accounting cycle and helps to identify any discrepancies or errors. It is important to perform this reconciliation regularly and to investigate any differences immediately.

4. The fourth part of the document discusses the importance of maintaining accurate records of fixed assets. This includes recording the purchase of new assets, depreciation, and the disposal of old assets. Accurate records are essential for determining the true value of the company's assets and for calculating the correct amount of depreciation expense.

5. The fifth part of the document outlines the procedures for handling payroll and other employee-related expenses. It is important to ensure that all employees are paid accurately and on time, and that all related expenses are properly recorded. This helps to maintain good employee relations and ensures that the company's financial statements are accurate.

6. The sixth part of the document describes the process of preparing financial statements. This includes the calculation of net income, the preparation of the balance sheet, and the preparation of the cash flow statement. It is important to ensure that all financial statements are prepared accurately and in a timely manner.

7. The seventh part of the document discusses the importance of maintaining accurate records of all taxes. This includes recording the payment of taxes, the calculation of tax liabilities, and the preparation of tax returns. Accurate records are essential for ensuring that the company is in compliance with all applicable tax laws.

8. The eighth part of the document outlines the procedures for handling all other financial transactions. This includes recording the purchase of inventory, the sale of goods, and the payment of interest and dividends. It is important to ensure that all transactions are properly recorded and that the company's financial statements are accurate.

9. The ninth part of the document describes the process of auditing the company's financial records. This is a critical step in the accounting cycle and helps to ensure the accuracy and integrity of the financial statements. It is important to perform an audit regularly and to investigate any discrepancies immediately.

10. The tenth part of the document discusses the importance of maintaining accurate records of all financial transactions. This is essential for ensuring the integrity of the financial statements and for providing a clear audit trail. The records should be kept up-to-date and should be accessible to all relevant parties.

1. The following information is for the year ended 31/12/2018

2. The company's financial statements for the year ended 31/12/2018 are as follows:

Particulars	2018	2017
Revenue	1000	950
Cost of sales	(600)	(580)
Gross profit	400	370
Operating expenses	(250)	(240)
Operating profit	150	130
Finance income	10	10
Finance expense	(20)	(20)
Profit before tax	140	120
Income tax expense	(35)	(30)
Profit after tax	105	90
Dividends paid	(40)	(30)
Retained profit	65	60

3. The company's financial statements for the year ended 31/12/2019 are as follows:

Particulars	2019	2018
Revenue	1100	1000
Cost of sales	(700)	(650)
Gross profit	400	350
Operating expenses	(280)	(260)
Operating profit	120	90
Finance income	15	10
Finance expense	(25)	(20)
Profit before tax	110	80
Income tax expense	(27)	(20)
Profit after tax	83	60
Dividends paid	(30)	(20)
Retained profit	53	40

4. The company's financial statements for the year ended 31/12/2020 are as follows:

# Apéndice

## ANALISIS DE ALGUNAS VARIABLES

Al examinar los resultados de la Matriz de Insumo Producto 1992 en conjunto con la de 1987 y la de 1982, encontramos lo siguiente:

En términos de la participación relativa de los sectores en la producción, la manufactura constituyó el 44.0 por ciento y el sector de servicios el 41.6 por ciento. El sector de construcción y minería recuperó un poco, al alcanzar un 4.7 por ciento comparado con 4.2 en 1987; gobierno permaneció en 8.7 por ciento. La agricultura continuó su descenso, alcanzando apenas el uno por ciento de la producción total en la economía. Vale señalar que la crítica situación de la industria de la caña es uno de los factores que ha contribuido a esto. Dicha industria ha ido en picada en las últimas décadas y bajó significativamente para el año fiscal 1992, con el consabido cierre de centrales. Ha sobrevivido a base de subsidios, lo que explica el por qué de su valor añadido negativo.

Siguiendo el análisis ya no por sector agregado, sino por industria, se observa que en cuanto a producción, valor añadido y demanda intermedia, las industrias de drogas, comercio, bienes raíces, gobierno, maquinaria eléctrica, refinerías de petróleo y servicios comerciales, han estado entre las cinco predominantes en uno o varios de los periodos examinados. Es de hacer notar que gobierno, al compararla con las demás industrias por sí solas, sí constituye un componente bastante importante. Así mismo, la industria de la construcción, que está entre las primeras diez de mayor producción local para los tres periodos, refleja un aumento significativo de 1987 a 1992. Dentro del sector de servicios, bienes raíces ha tenido aumentos marcados en su producción local desde 1982.

El valor añadido, a nivel total, representa el 52.3 por ciento de la producción, proporción 0.2 por ciento sobre la de 1987 y 4.5 por ciento por encima de la de 1982.

Específicamente, en cuatro de las industrias arriba mencionadas, la proporción del valor añadido ha sido mayor que la de su consumo intermedio. Al examinar la composición de esa variable, vemos que por ejemplo en la industria de productos farmacéuticos, más del 90.0 por ciento de ese valor añadido se debe a la ganancia. En el caso de gobierno, como es natural, el cien por ciento son salarios y suplementos. En bienes raíces más del 50.0 por ciento son ganancia e intereses.

En 1992, el total de exportaciones representó un 43.2 por ciento de la demanda final, siguiendo la tendencia alcista de los últimos años (42.3 en 1987 y 40.5 en 1982 ). Desde ese punto de vista, esto es, las exportaciones como proporción de la demanda final, manufactura reflejó un 72.1 por ciento. En 1987 había sido 69.6 por ciento y en 1982 66.6. Agricultura reflejó en 1992 un 15.9 por ciento de exportaciones en su demanda final, comparado con 12.6 en 1987 y 9.4 en 1982, y servicios reflejó un 11.3 (10.5 en 1987 y 10.2 en 1982). Hay que aclarar sin embargo, que en el caso de agricultura, aunque las exportaciones reflejan un aumento relativo, éstas, al igual que las demás partidas de la demanda final de ese sector, realmente disminuyeron de 1987 a 1992. Esto indica que el aumento de un 8.0 por ciento que hubo en la producción agrícola, fue absorbido principalmente por la demanda intermedia.

El 41.2 por ciento de las exportaciones de la manufactura en 1992, fueron drogas y preparaciones farmacéuticas. Las próximas que más contribuyeron fueron las de maquinaria eléctrica, bebidas no alcohólicas e instrumentos científicos y profesionales, en orden de importancia. Para 1987 y 1982 respectivamente, la proporción de exportación de productos farmacéuticos, fue 36.8 y 29.0 por ciento del total de exportaciones manufactureras.

Finalmente, en cuanto al consumo personal, el valor más alto sigue estando en el sector de los servicios, que cada vez cobra mayor prominencia frente a la manufactura. Esta, en 1982 representaba un 40.4 por ciento del total de gastos de consumo personal y en 1992 representó un 32.7 por ciento. Mientras que los servicios subieron de un 55.9 en 1982 a un 60.7 por ciento en 1992, destacándose la industria de comercio, con 36.1 por ciento del total del sector y la de bienes raíces con 18.8 por ciento. Ambas industrias se encuentran entre las primeras cinco con mayor demanda intermedia, pero en ambas el consumo personal es mayor que esa demanda intermedia.

Hemos analizado algunas de las industrias sobresalientes en el año 1992 con respecto a las principales variables de la Matriz de Insumo Producto. Este y otros análisis se pueden realizar para todas las industrias y de acuerdo a diferentes propósitos.

# Conceptos y Definiciones

# Conceptual Framework

## CONCEPTOS Y DEFINICIONES

1. Matriz - es una serie de datos que se presentan en forma de filas y columnas, donde cada coordenada se lee haciendo referencia a lo que representa cada fila y columna de la matriz específica que se esté estudiando.
2. Insumo Producto - estudio económico que constituye un sistema de contabilidad donde se presenta, en forma de matriz, la distribución del abasto total de bienes y servicios en una economía, a través de la demanda intermedia y la demanda final de los consumidores.
3. Consumo intermedio - valor de lo que cada industria consume de otras y de sí misma para poder llevar a cabo su producción, ya sea ésta de bienes ó de servicios, luego de restar el valor añadido.
4. Demanda intermedia - lo que se requiere de una industria por parte de las demás, para que estas últimas puedan llevar a cabo su producción.
5. Valor Añadido - ingresos que se crean en la economía por concepto del pago a los factores de producción, tierra, capital y trabajo y otros cargos contra la producción de bienes y servicios. Este se compone de compensación a empleados, ganancia de las empresas, interés neto, depreciación (consumo de capital), contribuciones indirectas, pagos de transferencias de las empresas (donativos, etc.), y los subsidios que se restan al calcular el total.
6. Producción local - es el total de los bienes y servicios producidos en la economía en un período determinado. La producción local de cada industria es el valor total medido a precios del productor, de bienes y/o servicios producidos por esa industria en ese periodo.
7. Industria - bajo el sistema de clasificación industrial uniforme (CIU), una industria consiste de un grupo de establecimientos cuya actividad económica principal es la misma o semejante.
8. Sector industrial - unidad económica que comprende dos o más industrias similares, clasificadas bajo un mismo grupo.

9. Demanda final - es el valor total de los bienes y servicios consumidos por todos los sectores en la economía durante un periodo determinado. La demanda final se distribuye entre consumo de las personas, consumo de los gobiernos, la inversión, y las exportaciones.
10. Insumos - bienes o servicios necesarios para la elaboración de un producto final.
11. Fila - serie de datos colocados horizontalmente. En la Matriz de Insumo-Producto las filas representan las ventas ó distribución de la producción de una industria (DI).
12. Columna - serie de datos colocados verticalmente. En la Matriz de Insumo-Producto las columnas representan las compras que realiza una industria para llevar a cabo su producción (CI).
13. Standard Industrial Classification (SIC) - sistema de clasificación industrial uniforme (CIU) preparado por la Oficina de Presupuesto y Gerencia de Estados Unidos, para clasificar a las empresas de acuerdo a las operaciones que realiza. El mismo está en proceso de ser sustituido por el nuevo sistema *North American Industry Classification System* (NAICS).
14. Precios al productor – se refiere al precio del producto puesto en fábrica, el cual todavía no tiene incluido los costos de distribución.
15. Precios al comprador – precio final y valor en el mercado que paga el comprador; o sea, el precio del producto puesto en fábrica más sus costos de distribución.
