JULIO / JULY 1990

PREFACIO

El cuadro de Insumo Producto de 1981-82 que se presenta en esta publicación consta de 94 industrias. A diferencia del estudio de 1976-77, en ésta no se incluyen los productos.

Insumo Producto constituye un estudio de las relaciones interindustriales de nuestra economía. Representa un sistema de contabilidad basado en el balance entre el abastecimiento y el uso de la producción económica. El logro de este balance evita que se queden transacciones sin registrar. Este importante papel lo describió el estadístico francés, Delange: "La tabla de insumo producto ha jugado y jugará un papel importante en la mejora de los datos estadísticos porque, como es un medio para lograr la consistencia, muestra claramente aquellas deficiencias estadísticas que deberían eliminarse prioritariamente". Es decir, el mismo completa el marco estadístico que equilibra las Cuentas Nacionales.

PREFACE

The 1981-82 Input-Output table included in this publication was classified in 94 industrial sectors. This table differs from the previous one since commodities are not included.

The Input-Output study provides the data and tools for analyzing the interindustrial relationships of our economy. It has a variety of applications, including such diverse uses as a revising instrument of the Puerto Ricos' National Accounts. It also provides a meaningful description of the production flows and pinpoints the possible gaps and inconsistencies in National Accounts by fitting together the wide variety of economic data within a consistent framework which balance the supply and the use of the economic production.

The next Input-Output study will correspond to the census year 1987. Nevertheless, we are working on the annual estimates of the final demand by industries, in

JUNTA DE PLANIFICACION

El próximo estudio que se realizará corresponde al año censal 1987. No obstante, se están preparando los estimados anuales, de la demanda final por industria, lo que facilitará la actualización de las tablas de insumo producto en años intercensales haciendo uso de las técnicas desarrolladas al respecto. La primera tabla que se presenta en esta publicación es la matriz de transacciones, a precios del productor, con tres partidas en cada transacción. Estas se dividen en: el total de compras o ventas, desglosado entre local e importado. La segunda tabla es la matriz de coeficientes de requisitos directos, por dólar de producción. Por último, aparecen las matrices inversas $(I-A)^{-1}$ de producción local y total, también conocidas como matrices de requisitos directos e indirectos, por dólar de demanda final.

Queremos agradecer la colaboración de las empresas privadas, agencias gubernamentales e individuos que suministraron información y ayuda indispensable para la preparación de este estudio. Agradecemos, además, la dedicación y esfuerzos de los técnicos que trabajaron arduamente en este proyecto, especialmente a la Sra. Margarita Santini de Durán, ex Directora del Negociado de Análisis Social, Modelos y Proyecciones.

order to achieve the expectation of updating the input-output table during intercensus years using the technics developed for this purpose.

In this publication there are three tables comprising the study. The first is the transactions table at producers' prices. Each cell in the table consists of three entries: total production which is disaggregated into local and import.

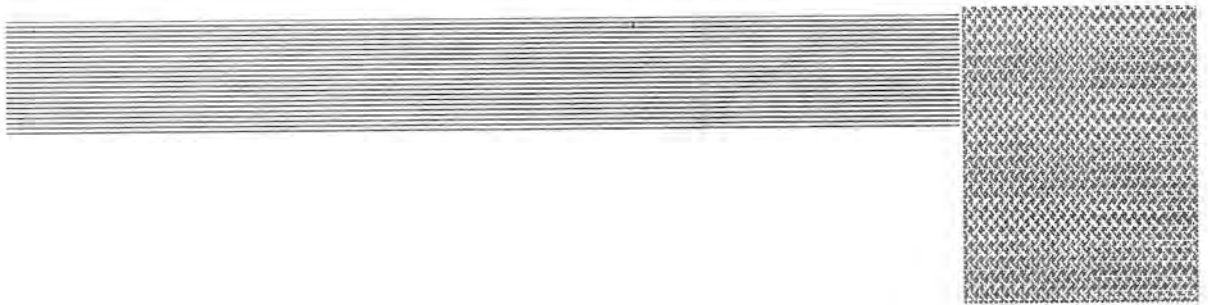

There is also the direct requirements table and the direct plus indirect requirements table (usually called the inverse matrix).

We take this opportunity to express our gratitude to all private enterprises, government agencies and individuals that made this publication possible by supplying information and other valuable help.

We also wish to acknowledge the dedication and effort of all our personnel, especially Mrs. Margarita Santini de Durán, former-director of the Bureau of Social Analysis, Models and Projections, for her valuable cooperation and assessment.

Introducción

Introduction

Insumo Producto

Input - Output

Introducción

El modelo de Insumo Producto de la Junta de Planificación tiene como base la matriz de insumo producto que presenta un cuadro de todas las relaciones interindustriales de la economía, en la cual se especifica la procedencia y la utilización de los bienes y servicios que se producen y se importan. El insumo producto por tanto representa un sistema de contabilidad económica basado en el balance entre el abastecimiento, o total disponible en la economía, y los usos de la producción económica. La producción local más las importaciones ajustadas;¹ componen el total disponible.

Los sectores económicos representativos de los usuarios son: las empresas utilizando materia prima (consumo intermedio); y sus gastos de inversión; las personas, con el consumo personal; los gobiernos, con todos los gastos en que incurren, y el resto del mundo, con sus importaciones equivalentes a nuestras exportaciones.

Introduction

The Input-Output model of the Puerto Rico Planning Board is based on an input-output matrix which represents the interindustry relationships of our economy, providing information on the origin of goods and services produced or imported (output or total supply) in our economy, and the final users or consumers of these (destination). In other words, the input-output represents an economic accounting system based on the flows of goods and services (local production) among individual industries of the economy, and the final users or consumers of this production. Output, or total supply is equal to local production plus adjusted imports¹.

The economic sectors representing consumers or final users are: industries, with their consumption of raw materials (intermediate consumption) and investments; individuals, with personal consumption expenditures; government, with purchases of goods and services.

JUNTA DE PLANIFICACION

El cuadro de Insumo Producto de 1981-82 consta de noventa y cuatro (94) industrias agrupadas como sigue: tres industrias de agricultura, una de minería, dos de construcción, treinta y una de manufactura, cincuenta y dos de servicios y tres de gobierno. La tabla de Insumo Producto se divide en (3) tres grandes componentes, a saber: 1) la demanda intermedia, 2) el valor añadido y 3) la demanda final.

La demanda intermedia, compuesta por las industrias, representa las transacciones intersectoriales realizadas por las industrias en su proceso productivo, es decir, las compras y ventas entre sí. El valor añadido, el cual aparece en la fila siguiente a la demanda intermedia, representa los pagos a los factores de producción tierra, capital y trabajo. La demanda final, compuesta por el consumo personal, consumo del gobierno y la inversión, aparecen a la derecha de la tabla en forma de columnas. Luego le sigue la columna de importaciones, las cuales se le restan a la demanda final para así obtener la producción local, al sumarle la fila de la demanda intermedia. De igual forma, por columna, la suma de la demanda intermedia, más el valor añadido es igual a la producción local.

The Input Output Table is divided into three (3) great components: intermediate demand, value added, and final demand. Intermediate demand represents all interindustrial transactions carried on through their production process; in other words, all purchases and sales within industries. Value added represents the payments for the factors of production land, capital, and work. It is presented in the table in the line immediately following intermediate demand. Final demand, which comprises personal consumption expenditures, government consumption expenditures and capital investment, appears at the right side of the table in a column form.

It should be noted that, for each and every industry, totals are the same at the end of either its corresponding line or column; both totals representing local production. Lines refer to production's disposition; columns, to input needed for such production.

Differences between the 1981 - 82 and previous Input-Output studies

Main differences among the 1981-82 Input Output study and previous ones are as follow:

Cabe señalar que, para una misma industria, la suma por el lado de la fila es igual a la suma de la columna y ambas representan la producción local o total. La diferencia radica en que por el lado de las filas se habla de la disposición de la producción, mientras que por columnas se refiere a los insumos requeridos para llevar a cabo esa producción.

Diferencias entre el estudio de Insumo Producto de 1981-82 y estudios anteriores

Las diferencias principales del Insumo Producto de 1981-82 y los anteriores son las siguientes:

1- Exclusión de productos

Sólo se presentan los datos por industria para facilitar y aligerar el cómputo de la matriz.

2- Cambios en metodologías

Se introdujeron cambios en los cálculos de producción y valor añadido de las industrias pertenecientes al sector bancario. El interés recibido se incluyó como parte de la producción y no del valor añadido.

1. Exclusion of products

Only data on industries have been included to shorten the computerization of matrix.

2. Methodology

Changes have been made for the calculation of both production and value added for all industries pertaining to banking. Interest received has been included only as a part of production; not of value added.

3. Hotel restaurants

Restaurants operating in hotel facilities have been transferred to the commerce industry, to which all other restaurants pertain.

4. Ocean freights

Ocean freights which was distributed among all industries were transferred to water transportation industry.

JUNTA DE PLANIFICACION

3- Transferencia restaurantes de los hoteles

Los restaurantes de los hoteles se transfirieron a la industria de comercio que es donde aparecen los demás restaurantes.

4- Fletes marítimos

Los fletes marítimos que estaban distribuidos entre todas las industrias se trasladaron a la industria de transportación marítima.

5- Tratamiento partida gastos de representación

Los gastos de representación se distribuyeron en todas las industrias por eso la columna 99000 en la demanda intermedia está en blanco a diferencia de la del año fiscal 1977.

6- Publicidad

Publicidad se separó de la industria de servicios comerciales por su importancia y para facilitar el trabajo.

7- Cemento y productos de concreto

La industria de cemento y productos de concreto se unió a la industria de productos de piedra, barro y cristal.

5. Travel and entertainment

These expenses have been distributed among all industries. This is why, different to 1977, column 99000 pertaining to intermediate demand is blank.

6. Advertising

It has been set apart from the business services industry. The importance of advertising prompted this change, as well as the fact that work on this area would be much easier.

7. Cement and concrete products

Both the cement industry and the concrete products have been grouped under the stone, clay and glass industry.

Uses of Input-Output

The mayor contribution of input-output to economic analysis is that it includes interindustry transactions among industries, within an economic structure in accordance with economic equilibrium accounts.

Usos del Insumo Producto

La mayor contribución del Insumo Producto al análisis económico consiste en que incluye las transacciones interindustriales entre las distintas industrias dentro de un cuadro balanceado de cuentas económicas. Es el único estudio que permite medir los impactos por industria, no sólo los directos, sino también los indirectos. Además, del mismo se derivan una serie de análisis por industria, tales como la medición de impactos, el estudio de eslabonamientos, de productividad, matrices de capital, de empleo, diversos tipos de multiplicadores. El análisis interindustrial es necesario en una serie de problemas empíricos para los cuales las técnicas del análisis de ingreso nacional y equilibrio parcial resultan inadecuadas.

Además, el Insumo Producto es la base del Modelo Econométrico de la Junta de Planificación para el cual se adicionan ecuaciones estocásticas y definicionales para completar el sistema de cuentas nacionales, incluyendo la balanza de pagos; todo por industria. Esto lo hace ser un modelo amplio y completo porque permite hacer proyecciones por industria.

This study is the only that provides measurements of both the direct and indirect repercussions of changes in demand. A series of industrial analysis can also be derived, from it such as: the impact by occupation, inter-industrial linkages, productivity, capital and matrix, and multiplier effects.

The input-output study constitutes the basis for the Puerto Rico's Planning Board Econometric Model. Upon it, the value added, as well as the introduction of new equations, can be expanded making our Model more reliable and complete; thus, permitting the industrial sectors to make projections or forecasts.

JUNTA DE PLANIFICACION

A continuación una serie de trabajos realizados haciendo uso de la Matriz de Insumo Producto.

The following works were prepared utilizing the Input Output Study:

1. Richard Weisskoff and Edward Wolff, "Development and Trade Dependence: The Case of Puerto Rico, 1948-1963", The Review of Economic and Statistics, Harvard University, November, 1975.
2. Richard Weisskoff "Income Distribution and Export Promotion in Puerto Rico" Karen R. Polenskie and Jiri V. Skolta (editors), Advances in Input-Output Analysis Proceedings of the Sixth International Conference on Input-Output Techniques, Vienna, April 22-26, 1974 Ballinger Publishing Co. Cambridge, Mass.
3. Edward N. Wolff, "The Rate of Surplus Value in Puerto Rico", Journal of Political Economy, University of Chicago, Volume 83, Number 5 1975.
4. Angel L. Ruiz y Fernando Zalacaín, "Energy and Economic Development of Puerto Rico", Caribbean Studies, Volume 17, Numbers 3 and 4 October 1977 January 1988.
5. Angel L. Ruiz, "Cambios en la Productividad Parcial Factor Trabajo en el Sector de los Servicios: Un Análisis Usando el Modelo de Insumo-producto", Revista de Ciencias Sociales, Universidad de Puerto Rico, Volumen 21, Números 3 y 4 septiembre-diciembre de 1979.
6. Angel L. Ruiz "An Input-Output Analysis of the Puerto Rican Finance Sector", Puerto Rico Business Review, The Commonwealth of Puerto Rico, Economic Development Bank Volume 6, Number 1 and 2, January February 1981.
